Monday briefing, Super Duper Law, October 5, 2026

Google LSA cost per signed matter nearly doubled in September

Google LSA now costs **$861 per signed matter**, up from $450 in August, on the same lead volume: 68 leads in the last 30 days against 67 before. The likely cause is when those leads arrive and how long they wait.

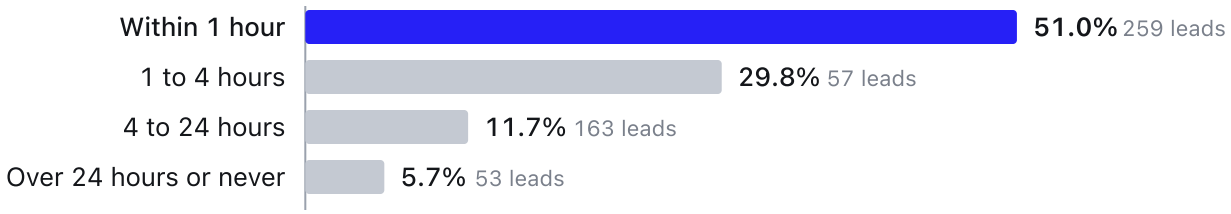

LSA leads now arrive after hours, when first contact is slow

Cost per signed matter went from $450 to $861, September against August. Only 12 matters signed in September against 20 in August, so treat the size as approximate. The signed rate on LSA leads fell from 31.9% to 20.9% (67 leads against 69). That is a likely drop, not a certain one. If it holds, it is worth about $159K in estimated fees on those leads, using the firm's own estimated value field.

Here is the probable reason. After-hours and weekend leads were 32.9% of LSA leads and are now 83.3%. Across every source, leads reached within an hour signed at 51.0%, and leads that waited more than a day or never heard back signed at 5.7%. More late arrivals, answered slowly, could account for much of this drop. Lead quality could also have slipped, and these numbers cannot rule that out.

Leads reached within an hour sign at 51.0%; after a day, 5.7%

Signed rate by how long the first contact took. Leads from Jun 24 to Sep 21. Higher is better

Family law realization fell, mostly on one attorney's matters

Family law realization is 76.8%, against 87.8% the 90 days before, on 314 time entries. That is about $21K of recorded work that did not reach a bill. About 81% of the change sits on one attorney's matters, 87.4% down to 53.2%. It is worth asking what changed on those matters: a rate, a dispute, a new matter type.

Receivables over 90 days are up, and one matter holds most of it

Receivables more than 90 days past due rose from $122,048 to $151,178 between the two aging reports, up 24%. One matter holds 78% of that total, so this is a collections conversation about one account, not a slide across the firm.

> **Look at this first**
>
> Pull September's LSA leads that arrived after 6pm or on a weekend and check how long each one waited for a first contact.

Too thin to call

A new wealth advisor referral source sent four leads and all four signed. That is too few to call it your best source.

New leads are up 6% (181 against 170). That is inside normal variation.

As of October 4, 2026. Leads and speed to lead cover the last 30 days. Realization covers the 90 days ending 35 days ago, so the work has had time to be invoiced. Receivables compare the two aging reports. Dollars at stake use the firm's estimated value field. Every number is computed from the firm's exports.
